Product design, mobile app development

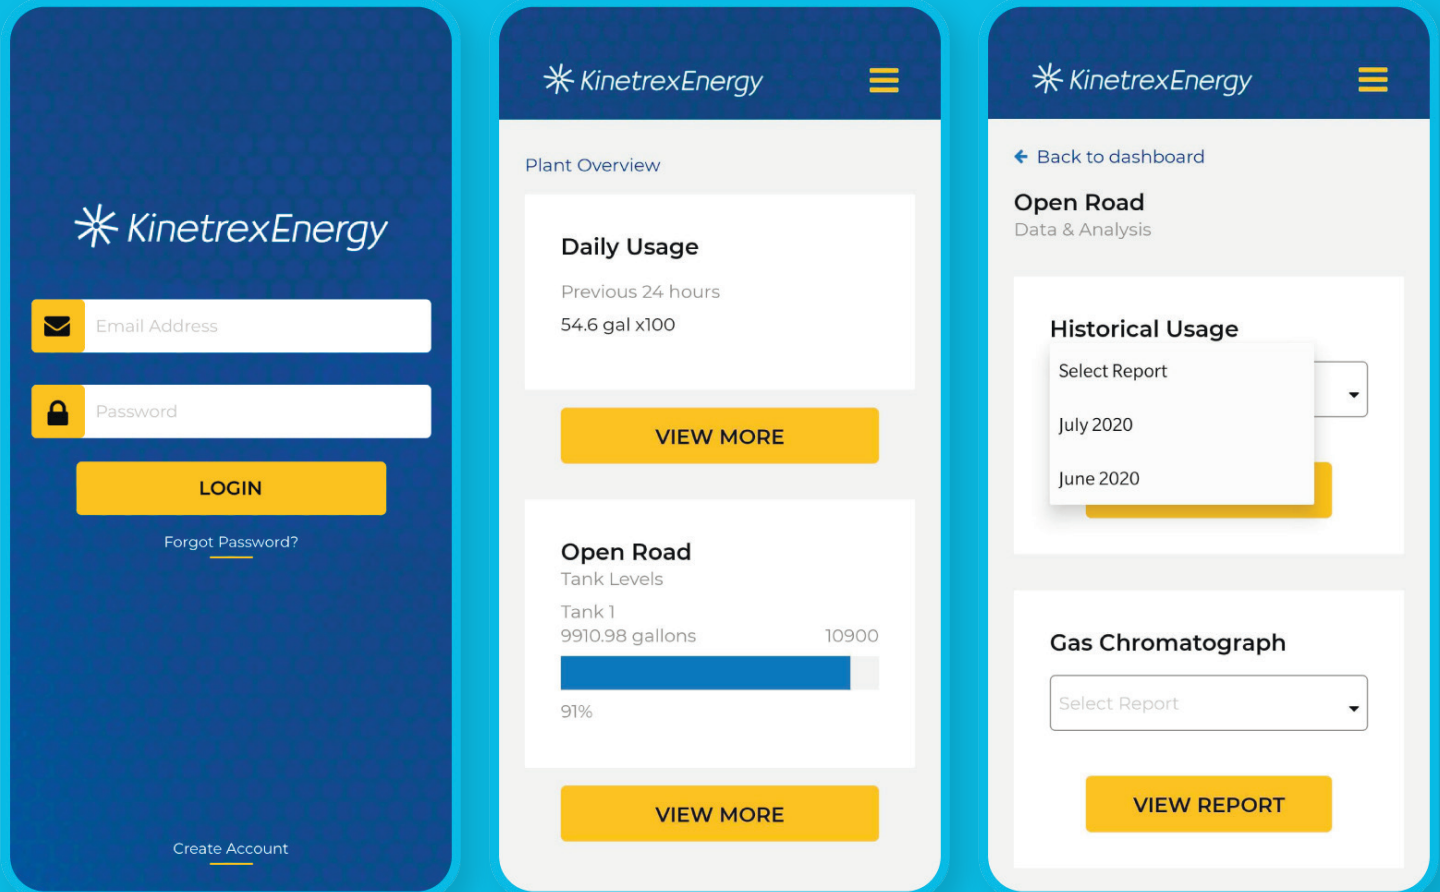

TECH STACK

React Native, Python, Django

DEDICATED MOBILE APP FOR UTILITY MANAGERS

Kinetrex Energy, the #1 supplier of liquefied natural gas in the Midwest, knew that documentation and reporting are critical to their own business and that of their customers. In order to provide key insights faster and with greater accuracy, they decided to build a mobile app that puts real time information into the palm of their customers' hands. With a mission to revolutionize the delivery of energy, they needed technology to match their bold ambitions, and selected RocketBuild to design and engineer their first customer-facing mobile application.

STREAMLINING OPERATIONS, MONITORING INFRASTRUCTURE, AND TRACKING INVENTORY

To help increase productivity and reduce hours of time spent on paperwork and spreadsheets, the app needed to provide utility managers with an immediate view of daily and monthly fuel usage, tank levels, status of deliveries with real-time tracking and push notifications, and live video feeds of their LNG system.

TECHNICAL CONSULTING

Planning for a customer-focused mobile app, an administrative web portal, and multiple APIs and data queries.

PRODUCT DESIGN

Easy for plant operators to make timely and critical business decisions in the field

DATA-RICH EXPERIENCE

Dashboards providing unprecedented levels of information
